**Subject:** Draft Primer- Revision 4.0

Participants of the development of the document entitled: Induced Seismicity by Injection Associated with Oil & Gas Development: A Primer on Technical & Regulatory Considerations Informing Risk Management and Mitigation document...

On behalf of the editorial committee, I want to express our sincere appreciation for your detailed review and input. The editorial committee worked together in person during a 3-day meeting in Oklahoma City and drafted revision 4.0 with all of your comments and suggestions in mind. With limited resources and the highly compressed schedule, we have made the decision not to respond to each point made to each individual but I assure you the committee looked and considered every response and many of your great suggestions have been included.

Below is a link to the latest draft. **Please note the draft document is not ready for further distribution.** It will continue to undergo change as it is now being considered by an Independent Technical Review Panel and then later will be sent to professional editors. As time is short and much is yet to be done, this is not a new request for another detailed review, but rather the document is being distributed to you as a courtesy to keep you informed of the progress. With that said, if you see anything that causes you great concern, please don't hesitate to let us know.
